SoftwareONE Announces Partnership with Salt Security to extend offerings to protect business critical APIs that are fueling today's digital transformation!

Amsterdam, The Netherlands | 10 January 2022 – **SoftwareONE, a leading global provider of end-to-end software and cloud technology solutions, today announced a partnership with Salt Security, the leading API security company. The partnership extends SoftwareONE offerings with the leading solution to protect APIs at the core of all modern applications found in every business.**

Application Programming Interface (APIs) have become core components of business-critical infrastructure, enabling digital transformation, fueling innovation, and powering every customer-facing application and partner-facing service. APIs by nature expose application business logic and valuable, sensitive data and as API use has increased, so has risk. Attackers have taken notice, and in recent years, APIs have become the primary target for their efforts.

“Digital transformation is a top priority for our clients and APIs are essential to fuel their innovation.” said Jeffrey de Heer, EMEA MultiVendor Leader at SoftwareONE. “With Salt Security we can help customers realize their digital transformation vision and ensure their business critical applications and services are protected with the most advanced and proven solution on the market.” The new partnership is the next step in our total security offering towards our customers!

The Salt Security API Protection Platform provides comprehensive security for APIs at the core of every modern application with a patented API Context Engine (ACE) architecture – powered by big data, artificial intelligence (AI), and machine learning (ML). It enables organizations to catalog their APIs, see where they expose sensitive data, detect and block API attackers, scan and test APIs, and provide remediation insights that developers can use to harden APIs and improve the security posture over time.

“Working with SoftwareONE is a natural fit given their focus and expertise to help customers drive digital transformation initiatives and meet time to market demands.” said Sunil Dutt, Director Channel Sales EMEA at Salt Security “We’re thrilled to partner with them to deliver solutions that secure the APIs fueling the growth of their customers.”

ABOUT SOFTWAREONE

SoftwareONE is a leading global provider of end-to-end software and cloud technology solutions, headquartered in Switzerland. With an IP and technology-driven services portfolio, it enables companies to holistically develop and implement their commercial, technology and digital transformation strategies. This is achieved by modernizing applications and migrating critical workloads on public clouds, while simultaneously managing and optimizing the related software and cloud assets and licensing. SoftwareONE's offerings are connected by PyraCloud, its proprietary digital platform, which provides customers with data-driven, actionable intelligence. With around 8,300 employees and sales and service delivery capabilities in 90 countries, SoftwareONE provides around 65,000 business customers with software and cloud solutions from over 7,500 publishers. SoftwareONE's shares (SWON) are listed on SIX Swiss Exchange.

ABOUT SALT SECURITY

Salt Security delivers an API Threat Protection solution focused on securing the ubiquitous APIs connecting everything from web and mobile applications to microservices and IoT devices. These are the APIs that you develop and own and are at the core of connecting your applications and data.

Powered by our AI-based Big Data engine and Holistic Detection architecture, only Salt Security:

- Discovers all your APIs and the sensitive data they expose
- Pinpoints and stops attackers during reconnaissance
- Eliminates API vulnerabilities to strengthen your security posture

Salt Security was founded in 2016 by alumni of the Israeli Defense Forces (IDF) to deliver the first, patented API Protection platform to secure APIs. Salt Security deploys in minutes, automatically learns your unique APIs, and requires no configuration or customization to help you protect and improve your API security.
