# SoftwareOne Data and AI Services
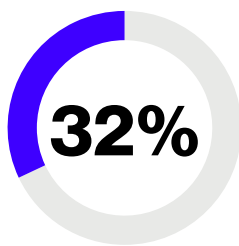

Data-driven, AI-powered

The era of AI is here, what does this mean for your business?
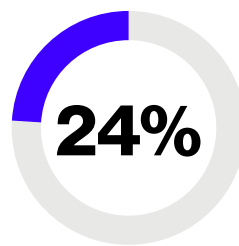

79%

Corporate strategists see AI and analytics as critical to their success over the next two years

(Gartner 2023)

32%

Data management is the top technical inhibitor to AI/ML, cited by 32% of organisations

(S&P 2023)

24%

CDOs characterise their organisations as data-driven

(Wavestone 2023)

2nd

Generative AI second most-frequently cited risk by senior risk executives

(Gartner 2023)

AI is not just technology; it's an enabler for organisations to achieve significant improvements in efficiency, insights, customer experience, and innovation. It's about becoming a data-driven enterprise, powered by digital solutions.

The data and AI landscape is rapidly increasing in complexity. New models, platforms, tools, and applications are released to market each month. And behind the hype, exist some basic truths: AI relies on how well you've prepared and unified your data, and how well you've trained your model. Additionally, AI presents some tough challenges around scalability, security, and data governance.

There are foundational elements, or threads, that must be knit together to make AI work. Each thread is essential, and omitting any of them can lead to the unravelling of an AI initiative. SoftwareOne understands how to weave the intelligence fabric that businesses need to succeed with data and AI.

softwareone

SoftwareOne Intelligence Fabric

SoftwareOne Intelligence Fabric is a comprehensive, compliant, secure, efficient, scalable, and future-proof methodology for data and AI from a services provider with the expertise and partnerships to deliver. Our Intelligence Fabric suite of accelerators, practices, and assets helps businesses establish a strong foundation, reduce risk, and obtain repeatable industry patterns to succeed with AI.

Intelligence Fabric provides

Security and governance			
Safeguard digital assets, ensuring authorised access, while managing your data for accuracy, traceability, and streamlined innovation			
Advisory	**Data management**	**Data synthesis**	**AI design**
Understand the data ecosystem maturity of your organisation and establish a vision and practical AI implementation roadmap	Collect data from multiple sources, integrate it into a unified format, securely store it, and structure it carefully to facilitate subsequent analysis	Generate new data points or augment existing ones to enhance the quality and diversity of your dataset, making it more suitable for AI applications	Understand the problem space, select appropriate algorithms, and design the AI model, training methodology, and integration
MLOps	**User experience**	**Adoption and change**	
Automate the end-to-end machine learning lifecycle by combining ML, DevOps, and data engineering practices	Enhance the usability, accessibility, and overall user satisfaction of AI products and solutions	Aid organisations in using new technologies like generative AI and in embracing a data-driven culture	
Partnerships			
Leverage our strategic partnerships with over 30 leading data and AI technology providers, including early access programmes			

Our services

SoftwareOne provides enterprise-grade digital transformation for businesses of all sizes, combining IT services, software licensing expertise, and applicable hyperscaler incentives to reduce costs. We ensure solutions are cost-optimised and underpinned by a strong business case for return on investment.
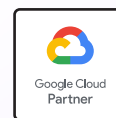

Data Foundations Services	Analytics and AI Services
Advisory services	
Harness the potential of data	**Unleash AI's transformative power**
• Improve data ecosystem maturity • Envision and align data strategy • Migration and modernisation assessments	• Envision and align your AI strategy • Generate analytics and AI use cases
Platform services	
Elevate data capabilities	**Enable advanced analytics and AI**
• Migrate legacy systems to advanced cloud environments • Streamline and accelerate data operations • Align governance for compliance and productivity	• Launch ready-to-use infrastructure and templates for data science projects • Efficiently manage and scale machine learning models • Tap into the potential of generative AI with industry-leading platforms
Solutions services	
Automate data management	**Unearth profound insights**
• Adopt modern data management processes • Unify and standardise data across your organisation • Migrate and modernise your data workloads	• Predict future trends and drive actions with targeted recommendations • Create interactive reports and mine business intelligence for process optimisation • Craft AI models that continually adapt and improve, emulating human thought

Reach out to schedule a free 1-hour strategy session with a data and AI expert today.

- 250+ data and AI experts
- 230+ projects delivered

- 30+ partnerships with leading data and AI technology providers
