

The Rollout of a PyraCloud Cloud Management Solution

About the Customer

Dreßler Bau GmbH is among Germany's biggest construction companies that remain under family control. The company, founded in 1913, has over 500 employees and six locations. Dreßler Bau customers benefit from over a century of experience in areas ranging from industrial and commercial construction to residential housing.

The company specializes in turnkey structural engineering projects, including buildings of cultural and historical significance. Also, Dreßler Bau holds a leading position on the German market for the production and use of architectural concrete.

Challenges

Dreßler Bau found it increasingly difficult to manage its cloud environment, particularly in support of joint ventures on significant projects. Dreßler Bau approached SoftwareONE looking for assistance. They wanted a solution that could quickly identify when and where Office 365 licenses had become free and available for user reassignment. The company also wished to obtain greater transparency in tracking cloud use. A detailed overview of active or inactive cloud licenses was a central objective.

Solution

Dreßler Bau implemented the SoftwareONE PyraCloud platform to address its leading requirements. As an end-to-end platform, PyraCloud helps the construction company manage its software portfolio and compile a precise report on the use of current cloud resources. The cloud management module lets Dreßler Bau identify license users in real-time to understand and manage how cloud resources are being used.

Results & Benefits

- > Independent control & management of cloud resources
- > Access to contract data, procurement details, and licensing without delay
- > Complete control over software currently in use
- > Inactive licenses can be quickly identified and reassigned to reduce software costs
- > PyraCloud data provides a robust foundation for strategic company planning and decision making

“Dressler Bau is now able to manage its entire Office 365 environment without any outside assistance thanks to the analysis options within PyraCloud. Free licenses are identified quickly and reassigned to meet the requirements. Not only does it save time but it also eases the strain on the budget.”
