

STAY IN CONTROL OF YOUR CLOUD SPEND WHILE WORKING FROM HOME

Leverage PyraCloud to govern and track your cloud spend across multiple cloud providers

With today's increased need to work remotely, many organizations are turning to cloud services to provide their employees with the resources they need to stay productive. This introduces tremendous complexity and challenges around visibility and cost control. If an organization does not have a good understanding of what cloud resources are being used and by whom, it leads to excessive cloud spend and it is nearly impossible to budget, track spend and communicate the cost strategy back to the business units.

SoftwareONE's PyraCloud can help you set budgets, track spend, report on cloud usage and chargeback cloud spend to the relative parts of your business. You can set alerts so you don't exceed budget thresholds and use our recommendations to optimize your cloud environment.

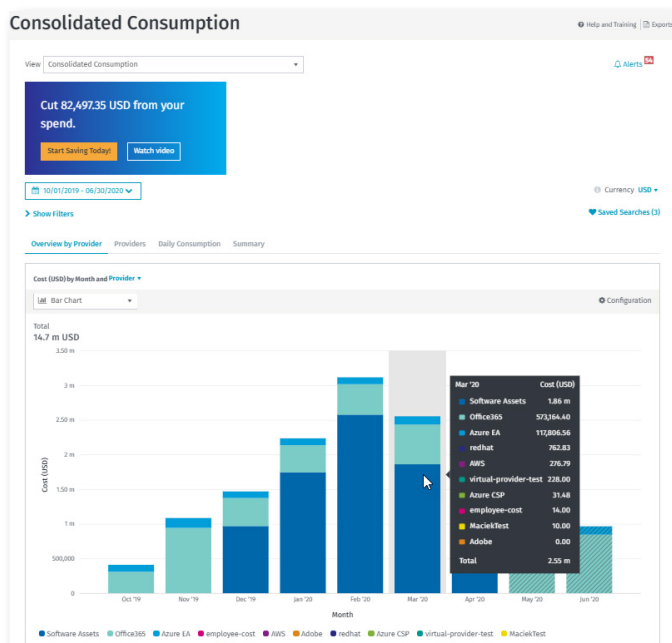

Figure 1: PyraCloud Consumption Analytics Overview

SPECIAL OFFER:

We are offering PyraCloud Cloud Spend Management at no cost to your organization for the next **6 months*** (*based on a 12 month contract)

See page 2 for an outline of the PyraCloud Cloud Spend Management features available to you.

Please speak to a SoftwareONE business development manager to learn more about this offer.

As your cloud consumption scales, PyraCloud allows you to easily grow with the business demand, both with SaaS and IaaS offerings, while giving you control to distribute the costs of the consumption to the departments who are driving its use. PyraCloud simplifies the governance, budgeting, spend tracking and chargeback of cloud costs to your organizations business cost centers.

PYRA CLOUD CLOUD SPEND MANAGEMENT

DISCOVER, STRUCTURE AND GOVERN CLOUD RESOURCES

PyraCloud Tag and Resource Manager (TRM) provides centralized tagging capabilities across your AWS and Azure environments. This enables you to discover, group and consistently tag cloud resources across your cloud providers – manually or through automated tag rules. Maintaining a consistent tagging structure allows you to aggregate resource information from all cloud providers for enhanced governance, cost analytics and chargeback.

DEFINE BUSINESS UNITS & MAP RESOURCES TO THOSE BUSINESS UNITS

PyraCloud Custom Group Manager (CGM) allows you to structure cloud workloads and environments into business units and cost centers. Using CGM, you can define your hierarchy based on your internal reporting needs. Resources can then be grouped into business units and cost centers. With PyraCloud Cost Allocation you can split the cost of shared resources such as storage or security services across multiple groups to better manage usage and spend.

ESTABLISH BUDGETS BY BUSINESS UNITS

PyraCloud Cloud Budget Manager (CBM) allows you to set budgets by business unit or project. By setting budgets, you can track costs down to the workload level, establishing strong accountability for cloud spend. Once set, CBM provides a view of where your organization is against that specific budget, for the defined length of time. Additionally, indicators and alerts can be set to show you how your organization is tracking against budgets.

ANALYSE & OPTIMIZE BUDGETS AND SPEND

PyraCloud Cloud Analytics Viewer lets you customize dashboards and reports based on business units, groups of resources or user personas. Customized reports and dashboards provide insight into cloud budget and spend across multi-cloud environments including Reserve Instance spend in amortized or actual cost view. These insights enable lines of business and stakeholders to govern, manage and optimize budget and spend of cloud resources.

CHARGEBACK CLOUD COSTS TO BUSINESS UNITS

PyraCloud Chargeback Manager helps you to consolidate cloud spend, mark-up as required and distribute the costs across your organization. You no longer need to manage this process manually, you can allocate cloud costs by creating internal chargeback's by cloud provider. These chargeback's can then be shared with key stakeholders across your business to show the precise amount of cloud resources they have consumed within a given time period.

OPTIMIZE YOUR ENVIRONMENT WITH RECOMMENDATIONS

PyraCloud Recommendations provide you with intelligent recommendations and suggestions to optimize, streamline and improve your software environment - be that on-premise or cloud. Recommendations provide bespoke and tailored recommendations that optimize your software environment. They help you to identify cost saving opportunities, streamline spend, uncover underutilized resources and track other key success metrics.

END-TO-END CLOUD SPEND MANAGEMENT WITH PYRA CLOUD

PyraCloud Cloud Spend Management enables organizations to deploy a consistent tagging methodology across multiple cloud environments, set budgets and track usage and spend against budgets, split shared cloud resources and setup chargeback invoices to relevant internal groups which enables end-to-end cloud spend management.
