

SECURE YOUR USERS & YOUR AZURE CLOUD

Know your risks, protect your assets & stay ahead of security threats and compliance requirements

Malicious hackers are constantly creating new malware and exploits to breach your datacenters, because it's big business for them. Whether you know it or not, your data is valuable to them. The problem is many times you don't even know an intruder has compromised your systems until it's too late.

We know that the impacts of data breaches can be personally impactful. Staying ahead of security threats will require a strong, but flexible, plan. It's crucial to identify which assets are most critical to your organization and evaluate the security and compliance gaps, so you can create a course of action for prevention and remediation. SoftwareONE as your trusted advisor can easily help you to stop malicious activities, and improve security effectiveness for your mission critical Azure workloads.

Stop malicious activities & improve security effectiveness in your IT environment

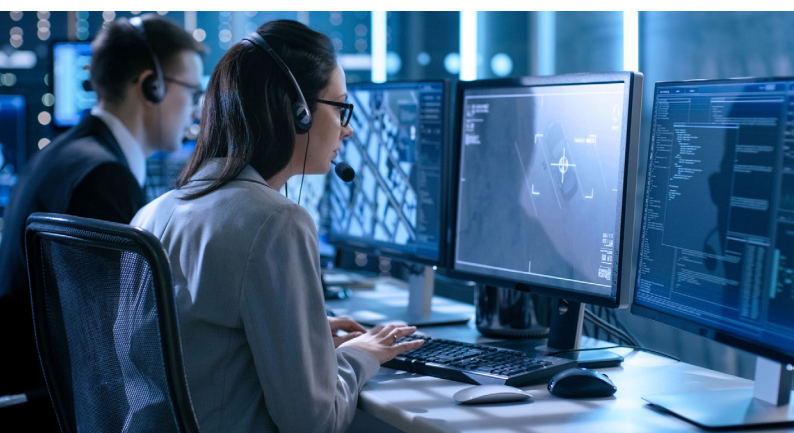

Our Security for Azure service is specifically designed to protect your Azure environment. To do so, we plan, configure, implement and support the Trend Micro Deep Security solution within your Azure environment.

Our leading cloud security consultants work with you to plan, build and run your optimal Security for Azure solution following a trusted approach consisting of the three key stages: (1) Protect, (2) Detect and (3) Respond. In the first stage, Protect, we protect your environment

and help you reduce your risk by decreasing the surface attack area that can be exploited. In the second stage, Detect, our reporting dashboard helps provide transparency to enable intelligent decision making. Finally, in the third stage, Respond, we enable a rapid and intelligent response to security issues to help improve the availability of critical business systems.

Your Security for Azure Benefits

- › **Malware Prevention** – Detect and stop malware
- › **System Security** – Lock down servers, report on log info
- › **Network Security** – Defend the network, assess workloads vulnerabilities and reduce server attacks
- › **Industry leading security technology** – Proven to reduce exploitation from zero-day cyber attacks
- › **Zero Touch Management** & solution deployment
- › **24x7 Proactive Security Support** & continuous monitoring of baseline Azure environment
- › **Manage Feature Upgrades** & version updates
- › **Compliance Effectiveness** for GDPR, PCI, HIPAA, FedRamp, NIST and other key regulations
- › **Bi-monthly Reporting** with insights for improving security posture

“Stay ahead with security services designed to protect your Azure workloads”

OUR SECURITY SERVICE FOR AZURE

Based on your challenges we have developed our **Security for Azure** Service to provide you with the best option to protect your virtual servers on Azure. Depending on your needs and business requirements you can select from various bundles that come in three different flavors: Platinum, Gold, and Silver.

So what's included in the bundles? Silver provides your organization with malware protection that not only scans for known malware, but also detects unknown threats using machine learning that can recognize suspicious activity. Gold includes everything in Silver, but also adds protection for network traffic and virtual patching for vulnerable servers. Gold also includes a Customer Success Manager to ensure your satisfaction. Last but not least, Platinum includes everything

from Gold and Silver, but adds in protection for your VM configuration and applications. It will lock down your VM configuration and prevent unauthorized changes to system files or the registry and prevents unwanted applications from being installed.

As part of all three of our bundles, our Cyber Security Operations Center (C-SOC) continuously monitors and alerts your environment enabling your security team to proactively respond to threats and security incidents. C-SOC acts as an additional layer of protection ensuring service requests are dealt with in real-time, detailed security reports are provided on a bi-monthly basis and new or emerging threats are detected well in advance of a security breach.

Security for Azure | Your Security Service for Virtual Servers on Azure

PLATINUM (CONFIGURATION & APPLICATION)	
GOLD (NETWORK)	<ul style="list-style-type: none"> PROTECT - Reduce risks <ul style="list-style-type: none"> Locking of VM configuration Analyzes log to identify related events RESPOND - Ensure availability <ul style="list-style-type: none"> 24x7 alert monitoring & response or configuration changes, software execution, anomalous activity
SILVER (MALWARE)	<ul style="list-style-type: none"> PROTECT - Reduce risks <ul style="list-style-type: none"> Stopping known malware Stopping unknown malware, detecting suspicious files and behavior with Machine Learning DETECT - Increase transparency <ul style="list-style-type: none"> Monitoring and installation of latest malware signatures Monthly malware reporting RESPOND - Ensure availability <ul style="list-style-type: none"> 24x7 alert monitoring and response to malware issue
	<ul style="list-style-type: none"> PROTECT - Reduce risks <ul style="list-style-type: none"> Immediate virtual patching to protect against zero-day attacks VM-Firewall to reduce server vulnerability Avoiding suspicious or unauthorized changes DETECT - Increase transparency <ul style="list-style-type: none"> Monthly network & system protection reporting Scheduled vulnerability scanning RESPOND - Ensure availability <ul style="list-style-type: none"> 24x7 alert monitoring & response for server-based intrusion prevention & firewall
	<ul style="list-style-type: none"> Dedicated Subject Matter Expert <ul style="list-style-type: none"> Increase security through expert advisory <ul style="list-style-type: none"> Custom rules to align to customer-specific requirements Monthly technical briefings to provide key security insights Quarterly executive briefings to provide strategic guidance
	Dedicated Customer Success Manager to ensure satisfaction
