

4 REASONS WHY IT'S TIME TO DIGITIZE YOUR SOFTWARE PROCUREMENT

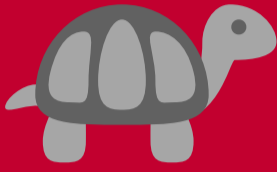

Procuring software with a digital supply chain will outperform the old model every time.

OLD MODEL

VS

DIGITAL MODEL

SLOW PROCESSES

Operational time and effort are high and costly for managing Tiers 2 and 3 software transactions. Going unmanaged creates efficiency gaps.

EFFICIENT OPERATIONS

Digitized operations create higher effectiveness for IT procurement. Purchasing teams address demands easily using an automated platform.

UNMANAGED RENEWALS

Many procurement teams still manage software renewals on old-fashioned, inefficient spreadsheets.

PROACTIVE RENEWAL MANAGEMENT

Save time and resources with accurate spending and renewal reporting in a real-time, intuitive platform.

MISSING OR UNCLEAR DATA

The overall lack of transparency and reliable data in the old model can make it difficult to make decisions confidently.

CLEAR, TRUSTWORTHY DATA

Contract data resides in a single platform, providing transparent, trustworthy data that enables informed, data-driven decision-making.

BURIED ENTITLEMENT

It can take hours of searching through spreadsheets and contacting your supplier to verify entitlement information.

ENTITLEMENT VISIBILITY

A digital supply chain stores data accurately, automates processes, and sets the foundation for a software asset management (SAM) program.
