SECURITY RISKS INSIDE YOUR OFFICE

Protecting your company’s data by securing your network is crucial – but many businesses overlook the need to protect their physical office from threats, too. Here are ten security risks that your IT teams needs to be aware of.

- Keylogging
- Stolen IDs
- Known USB devices
- Unattended devices
- Document theft
- Unauthorized installations
- Mysterious USBs
- Unaccounted visitors
- Tailgating
- Old devices

How can we help you?
