

AMAZON WEB SERVICES (AWS) – PORTAL-WORKSHOP

Start successfully in the Amazon cloud

Companies around the world are introducing cloud-based solutions at a rapid pace. With the use of Amazon Web Services (AWS), businesses are becoming more agile, competitive and innovative. In order for you to successfully transfer your workloads to the cloud, it is necessary to assign portal authorizations in a targeted manner and to control costs proactively.

The goal of the portal workshop is to give you an overview of the functional diversity and the possible areas AWS makes sense for your organization. In addition, SoftwareONE will guide you from step one to the finish line.

CONTENT OF THE AWS PORTAL-WORKSHOPS

In our AWS Portal Workshop you get a complete overview of the AWS Stack and Management Console from our AWS Architects. We show you how you assign your AWS consumption in detail by cost center. By setting up user and access management, you can manage your IT budget while saving money. The transparent billing overview provides warnings for unexpected costs.

- Workshop on site or remote
- An overview of the AWS stack and management console
- Presentation of security concepts for external access
- Overview of AWS user and role concept according to IAM Best Practices
- Overview of Cost Management in AWS
- Securing the ORA account (Organizational Root Account)
- Securing access via MFA
- Consolidated billing of multiple AWS accounts
- Creation of cost transparency through tagging
- Establishment of billing alerts

PYRA CLOUD PLATFORM

PyraCloud helps your business set budgets by business units and track expenses. You can proactively optimize your cloud environment and effectively track the expenditure per business unit for cost control.

REGULATE AND MANAGE BUDGETS AND EXPENSES FOR YOUR CLOUD ENVIRONMENT
