

PYRA CLOUD FEATURE SUMMARY AND DESCRIPTION BY MODULE

MAIN FEATURES				DESCRIPTION
	Base Platform	Software Licensing Management	Cloud Management	
Customizable Dashboard	●	●	●	Customize the dashboard including size of tiles and what tiles to display as per user requirements.
Click-to-Chat	●	●	●	View status of SoftwareONE Account teams globally, presence awareness, have a web chat and directly call account team as required.
Quotes, Orders, Invoices	●	●	●	Global Purchasing with customer specific catalog and pricing. Pull real-time reporting on all quotes, orders and invoices along with visibility into the current processing status of each. General search by using PO, reference, quote, order and invoice numbers provides a list of all matches across the organization --- global visibility.
Shipments	●	●	●	A summary of all software items shipped to your organization.
Workflow	●	●	●	Manage the process from quote to order to invoice. Ability to manage this process with checks and balances depending on approval levels required.
Credit Memos	●	●	●	Provides a list of all credit memos your organization has received.
Special Requests	●	●	●	Ability to request and track non-standard products on a global scale to gain visibility into non-standard products and publishers.
Service Provider (SPLA) Reporting & Dashboard	●	●	●	Advanced management for organizations managing many Service Provider License Agreements (SPLA). Manage single or multiple monthly reporting for your Microsoft SPLA agreements.
Product Catalogs	●	●	●	Catalogs can be customized on the current and active contracts that take into account discounts for specific levels or pools within agreement structures. Define organizations' global and local procurement strategies. Each country can have its own catalog and pricing that can be tied to local or global agreements.
Shopping Cart	●	●	●	Establish multiple shopping carts and ability to see all pricing globally.
Favorites and Shopping Lists	●	●	●	Ability to select organizational favorites. These favorites can also be set as global company-wide favorites for all users to reference. Create shopping lists of products as a recurring order option.
Reporting	●	●	●	Real-time global reporting, pull reports of quotes, orders, invoices assets and agreements created either by sales or organizational employees. Reports can be sent through E-Mail.
Decision Calculator	●	●	●	Customers are able to compare Cloud Service Providers offerings, i.e., Microsoft, AWS and Google at a glance. Decision Calculator provides high-level pricing differences for each cloud resource available.
Contracts	●	●	●	Ability to view all contracts and what is active or expired as well as details. Ability to set alerts for true-ups, renewals and expiring contracts. Create Calendar reminders for your contracts. View all history details as PyraCloud pulls data from multiple sources to give you one single global view. User can filter reporting to show licenses depending how they are purchased globally. Establish responsible owner per contract by role and responsibility.
Assets	●	●	●	Use PyraCloud to manage your asset inventory, serial numbers and corporate installation keys. Customer can add keys and decide who within the organization has access to this information. Customer can store all License proofs, certificates & invoices. Customers have the ability to upload documentation to all agreements or export contract and license assets in excel or csv.
Download Center	●	●	●	Dedicated software download area for software packages or general software products. Currently download standard Microsoft, Adobe, and TechSmith medias. Report and track who and how users access this media.
EA True-Up Module		●		Optimize and simplify the EA True-up process with the power of a dedicated application instead of hundreds of Excel spread sheets. PyraCloud's EA True-up Module can help locally and globally manage this process from collection to asset allocation. Setup customer specific EA Agreement True Up Management Module to assist in the defined and potentially global structure of organization.
Electronic Software Distribution		●		Central storage to manage, deliver, and archive software packages. Use and leverage PyraCloud to manage, track, archive, download software packages, and medias in a self-service or managed-service offering. Upload, manage, and report on customer-specific images and software. Use PyraCloud to manage and assist with software deployment.
Risk Profiler		●		Analysis of top publishers based on installation and spend to determine which publishers have a high risk to be audited. Customers can upload their summary of software installs and SoftwareONE will provide a view of their risk posture.
Advanced Reporting		●		Schedule reports for quotes, orders and invoices and receive in PDF format. Additionally, setup sFTP for advanced reporting needs.
Advanced Workflow		●		Enable multi step approval workflow depending on Price or Publisher. Provides up to 3 levels for purchase approvals. Determine escalation process for approving orders before sending to SoftwareONE for processing.
Azure Consumption			●	Gain full control for Azure spend and optimize, plan, and predict it. Track, manage, and control Azure consumption. Filter and Drill Down features help to analyze and get transparency and find optimization potential. Predictions show trends and provide additional insights based on Agreement Terms. Review, analyze, and make decisions about Azure subscription through the Cloud Consumption Module. Get a quick view of on-time and money metric of subscription, enables users to go directly to Azure subscription to analyze.
AWS Consumption			●	Review, analyze, and make decisions about AWS subscription through our Cloud Consumption Module. This a quick view of on-time and money metric of AWS subscription, enables user to go directly to AWS subscription to analyze.
Office 365 Consumption			●	Review, analyze, and make decisions about your Office 365 subscription through the Cloud Insider Module. This feature enables an Office 365 tile with a quick view into subscription, then seamlessly authenticate to Cloud Insider subscription to perform analysis.
